A study examined reading performance data on 659,214 students in grades K-12 for the 1994-95 school year to determine the possible effect of literature-based reading practice on student performance in schools of various kinds. Using a computer-based testing program to measure student reading practice, the study compared the amount of practice students received in small and large schools as well as in private and public schools. It also observed the trends in reading practice across grades, and compared amounts of practice between high- and low-performing students based on standardized test results. Key findings include the following: (1) high school students on average spent about as much time in literature-based reading practice as kindergarten students; (2) when ranked according to the amount of reading they do, students in the top 5% read 144 times more than students in the bottom 5%; (3) students in schools with populations of 200 or fewer engaged in twice as much reading practice as those in schools with populations of 1,000 or more; (4) students in private schools practiced reading 67% more than public school students; and (5) students in the highest-performing states in the NAEP Reading Study engaged in 59% more reading practice than those in states in the bottom quartile. Findings suggest that the amount of literature-based reading students received explains the varying reading performance of individual students, various categories of schools, and regions. In the context of previous studies, these findings make a compelling case for adopting substantial in-school reading practice time throughout the grades. (Contains 13 figures and 27 notes. ### **A Perfect Darkness**

Katherine of Valois was born a princess, the daughter of King Charles VI of France. But by the time Katherine was old enough to know him, her father had come to be called "Charles the Mad," given to unpredictable fits of insanity. The young princess lived a secluded life, awaiting her father's sane moments and suffering through the mad ones, as her mother took up with her uncle and their futures became more and more uncertain. Katherine's fortunes appeared to be changing when, at nineteen, she was married to King Henry V of England. Within two years,

she gave birth to an heir—but her happiness was fleeting. Soon after the birth of her son, she lost her husband to an illness. With Joan of Arc inciting the French to overthrow English rule, Katherine’s loyalty to her adopted homeland of England became a matter of intense suspicion. Katherine had brought her dowry and borne her heir; what use was she to England? It was decreed that she would live out her remaining years alone, far from the seat of power. But no one, not even Katherine herself, could have anticipated that she would fall in love with and secretly marry one of her guardians, Owen Tudor—or that a generation later, their grandson would become the first king of the great Tudor dynasty. a concept that is misunderstood and under attack - has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in

an engaging, narrative style, Good Derivatives will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

### **Where You Find it**

In the early 1960s, computers haunted the American popular imagination. Bleak tools of the cold war, they embodied the rigid organization and mechanical conformity that made the military-industrial complex possible. But by the 1990s—and the dawn of the Internet—computers started to represent a very different kind of world: a collaborative and digital utopia modeled on the communal ideals of the hippies who so vehemently rebelled against the cold war establishment in the first place. From Counterculture to Cyberculture is the first book to explore this extraordinary and ironic transformation. Fred Turner here traces the previously untold story of a highly influential group of San Francisco Bay-area entrepreneurs: Stewart Brand and the Whole Earth network. Between 1968 and 1998, via such familiar venues as the National Book Award-winning Whole Earth Catalog, the computer conferencing system known as WELL, and, ultimately, the launch of the wildly successful Wired magazine, Brand and his colleagues brokered a long-running collaboration between San Francisco flower

power and the emerging technological hub of Silicon Valley. Thanks to their vision, counterculturalists and technologists alike joined together to reimagine computers as tools for personal liberation, the building of virtual and decidedly alternative communities, and the exploration of bold new social frontiers. Shedding new light on how our networked culture came to be, this fascinating book reminds us that the distance between the Grateful Dead and Google, between Ken Kesey and the computer itself, is not as great as we might think.

### **Hunting Fear**

From the bestselling author whose prose “matches the best of John Grisham and Scott Turow” (Providence Journal) comes a gripping thriller featuring attorney Dismas Hardy as he investigates the murder of a wealthy man whose heirs are all potential suspects. Finally recovered from two gunshot wounds, Dismas Hardy is looking forward to easing into retirement and reconnecting with his family. But he is pulled back into the courtroom when Grant Wagner, the steely owner of a successful family business, is murdered. The prime suspect is Wagner’s bookkeeper Abby Jarvis, a former client of Hardy’s, who had been receiving large sums of cash under-the-table from the company—but she insists that she’s innocent. Preparing for trial, Dismas investigates the Wagner clan and discovers dark, twisted secrets, jealous siblings, gold-digging girlfriends, betrayals, and blackmail. The closer he gets to the Wagners, the clearer it becomes that Dismas

has a target painted on his back. With razor-sharp dialogue and whip-smart plotting, Poison once again demonstrates that “Lescroart is a master craftsman” (Associated Press).
