Friendly Biology opens the world of biology to high school students in a gentle, non-intimidating manner. Students are led through meaningful, well-written lessons and lab activities with the goal of attaining a greater respect for the beauty and complexity of living things. Topics covered include: Characteristics common to all living things; Basic chemistry as it pertains to living things; The roles of carbohydrates, lipids, proteins and nucleic acids in living systems; Cytology; Mitosis and meiosis; Chromosome duplication and protein synthesis; The importance of pH in living systems; Methods of reproduction; Mendelian genetics; Taxonomy; A survey of members of each kingdom of living things with emphasis placed on various classes and orders of importance; An overview of all body systems of humans and Ecology of living things. 28 lessons with lab activities included. Worksheet pages sold separately in Student Workbook. Tests sold separately in Tests and Answer Keys Booklet.

The SOLARO Study Guide is designed to help students achieve success in school. It is a complete guide to be used by students throughout the school year for reviewing and understanding course content, and for preparing for assessments. The content in Texas High School Biology is specifically aligned to the Texas state standards for those who intend to have students complete biology by the end of high school. Each Class Focus includes the following sections: Structure and Function of Living Things; Genetics; Evolution and Classification; Biological Macromolecules and Metabolism; Biological Systems; and Ecosystems. To create this book, teachers, curriculum specialists, and assessment experts have worked closely to develop the instructional pieces that explain each of the key concepts for the course. The practice questions and sample tests have detailed solutions that show problem-solving methods, highlight concepts that are likely to be tested, and point out potential sources of errors. Enhanced treatment of concepts, more practice sections, and additional learning tools are found in the accompanying online version of SOLARO which may be accessed through the web or on mobile devices.

## **How I Changed My Mind About Evolution**

"For the wrath of God is revealed from heaven against all the ungodliness and unrighteousness of men, who suppress the truth in unrighteousness who exchanged the truth of God for the lie, and worshiped and served the creature rather than the Creator." Romans 1:18-25 Evolution never happened. The best scientists in the history of the world didn't believe in it, so why should you? Men like Newton, Euler, Galileo, Kepler, Bacon, Kelvin and Faraday believed Scripture and science, God's word and His works, were completely compatible and should be studied together. Then Darwin came along and published On the Origin of Species

for the purpose of showing that "species had not been separately created" (Descent of Man, p. 62), exchanging the truth of God for a lie and paving the way for a study of science apart from God. Evolutionary thinking has taken a tremendous toll on the lives and minds of many, but there is hope. In The Exchange of Truth, Dr. Shormann shows that with a little thought and a basic understanding of genetics and probability, anyone can liberate themselves from evolution's false worldview. Read the book and learn how.

For students, DIY hobbyists, and science buffs, who can no longer get real chemistry sets, this one-of-a-kind guide explains how to set up and use a home chemistry lab, with step-by-step instructions for conducting experiments in basic chemistry -- not just to make pretty colors and stinky smells, but to learn how to do real lab work: Purify alcohol by distillation Produce hydrogen and oxygen gas by electrolysis Smelt metallic copper from copper ore you make yourself Analyze the makeup of seawater, bone, and other common substances Synthesize oil of wintergreen from aspirin and rayon fiber from paper Perform forensics tests for fingerprints, blood, drugs, and poisons and much more From the 1930s through the 1970s, chemistry sets were among the most popular Christmas gifts, selling in the millions. But two decades ago, real chemistry sets began to disappear as manufacturers and retailers became concerned about liability. The Illustrated Guide to Home Chemistry Experiments steps up to the plate with lessons on how to equip your home chemistry lab, master laboratory skills, and work safely in your lab. The bulk of this book consists of 17 hands-on chapters that include multiple laboratory sessions on the following topics: Separating Mixtures Solubility and Solutions Colligative Properties of Solutions Introduction to Chemical Reactions & Stoichiometry Reduction-Oxidation (Redox) Reactions Acid-Base Chemistry Chemical Kinetics Chemical Equilibrium and Le Chatelier's Principle Gas Chemistry Thermochemistry and Calorimetry Electrochemistry Photochemistry Colloids and Suspensions Qualitative Analysis Quantitative Analysis Synthesis of Useful Compounds Forensic Chemistry With plenty of full-color illustrations and photos, Illustrated Guide to Home Chemistry Experiments offers introductory level sessions suitable for a middle school or first-year high school chemistry laboratory course,

and more advanced sessions suitable for students who intend to take the College Board Advanced Placement (AP) Chemistry exam. A student who completes all of the laboratories in this book will have done the equivalent of two full years of high school chemistry lab work or a first-year college general chemistry laboratory course. This hands-on introduction to real chemistry -- using real equipment, real chemicals, and real quantitative experiments -- is ideal for the many thousands of young people and adults who want to experience the magic of chemistry.

### **Teks Preparation and Study Guide**

Evolution is the central unifying theme of biology. Yet today, more than a century and a half after Charles Darwin proposed the idea of evolution through natural selection, the topic is often relegated to a handful of chapters in textbooks and a few class sessions in introductory biology courses, if covered at all. In recent years, a movement has been gaining momentum that is aimed at radically changing this situation. On October 25-26, 2011, the Board on Life Sciences of the National Research Council and the National Academy of Sciences held a national convocation in Washington, DC, to explore the many issues associated with teaching evolution across the curriculum. Thinking Evolutionarily: Evolution Education Across the Life Sciences: Summary of a Convocation summarizes the goals, presentations, and discussions of the convocation. The goals were to articulate issues, showcase resources that are currently available or under

development, and begin to develop a strategic plan for engaging all of the sectors represented at the convocation in future work to make evolution a central focus of all courses in the life sciences, and especially into introductory biology courses at the college and high school levels, though participants also discussed learning in earlier grades and life-long learning. Thinking Evolutionarily: Evolution Education Across the Life Sciences: Summary of a Convocation covers the broader issues associated with learning about the nature, processes, and limits of science, since understanding evolutionary science requires a more general appreciation of how science works. This report explains the major themes that recurred throughout the convocation, including the structure and content of curricula, the processes of teaching and learning about evolution, the tensions that can arise in the classroom, and the target audiences for evolution education.

### **Reading Essentials for Biology**

Biology 2e (2nd edition) is designed to cover the scope and sequence requirements of a typical two-semester biology course for science majors. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology includes rich features that engage students in scientific inquiry, highlight careers in the biological sciences, and offer everyday applications. The book also includes various types of practice and homework questions that help students understand -- and apply -- key concepts. The 2nd edition has been revised to incorporate clearer, more current, and more dynamic explanations, while maintaining the same organization as the first edition. Art and illustrations have been substantially improved, and the textbook features additional assessments and related resources.

Perhaps no topic appears as potentially threatening to evangelicals as evolution. Yet many evangelicals have reconciled their firm beliefs in God and the Bible with the conclusions of science. How? Here are the stories of over two dozen evangelical scientists, pastors, biblical scholars and theologians who have come to embrace both evolution and faith.

### **The Exchange of Truth**

From the days of steamship travel to Palestine to today's evangelical Christian tours of Jesus's birthplace, the relationship between the United States and the Holy Land has become one of the world's most consequential international alliances. While the political side of U.S.-Israeli relations has long played out on the world stage, the relationship, as Shalom Goldman shows in this illuminating cultural history, has also played out on actual stages. Telling the stories of the American superstars of pop and high culture who journeyed to Israel to perform, lecture, and rivet fans, Goldman chronicles how the creative class has both expressed and influenced the American relationship with Israel. The galaxy of stars who have made headlines for their trips includes Frank Sinatra, Johnny Cash, Leonard Bernstein, James Baldwin, Barbra Streisand, Whitney Houston, Madonna, and Scarlett Johansson. While diverse socially and politically, they all served as prisms for the evolution of U.S.-Israeli relations, as Israel, the darling of the political and cultural Left in the 1950s and early 1960s, turned into the darling of the political Right from the late 1970s. Today, as relations between the two nations have only intensified, stars must consider highly fraught issues, such as cultural boycotts, in planning their itineraries.
