Handbook of Budgeting

Budgeting

Get Free Budgeting Profit Planning And Control 5th Edition

The U.S. Department of Defense accounts for over half of federal government discretionary spending and over 3% of GDP. Half of all federal employees work for the Department. The annual budget for the military not only provides for those salaries, it covers the baseline and wartime operating expenses of the force, and hundreds of billions of dollars of investment in new capabilities and technologies. Given the materiality of the defense function and amount of resources it consumes, the processes for budgeting for defense and managing the funds is important to understand. This text provides a fully integrated view of defense budgeting. It takes the position that defense budgeting is a specific instance of public budgeting, and public budgeting is a specific instance of public policy. In order to fully understand how the nation budgets for defense, it first lays a theoretical and conceptual foundation for public policy and public budgeting. That is followed by an assessment of the political and policy context for defense, including the overarching federal budget process and role of Congress in setting defense policy. Only then does the text explore the specifics of defense budgeting: how, by whom, and why the budget is crafted. Beyond the topic of budgeting – formulating, requesting, and legitimating the request for funds – the book tackles financial management topics. Included are discussions of federal appropriations law, funds management, accounting requirements, intragovernmental business transactions, and contemporary topics of defense policy such as funding overseas contingency operations in an era of deficit control legislation. This book is an appropriate reference for both students and practitioners of defense budgeting and

financial management. It would also be appropriate in a general public budgeting course. Most public budgeting texts focus on state and municipal governments and there are few that address the federal system. This book fills that gap and provides a specific example of federal budgeting.

In their groundbreaking book, authors Jeremy Hope and Robin Fraser show how organizations can break free from the annual budget trap once and for all. Beyond Budgeting is not a new financial-planning process - it is an alternative, coherent

management model that enables companies to manage performance through processes specifically tailored to today's volatile marketplace. Hope and Fraser spent five years studying a wide range of international companies - from a global corporation to a small charity, from a bank to a ball-bearings manufacturer - that have already abandoned traditional budgeting to varying degrees. From these pioneering experiences, the authors have distilled a set of guiding principles that will take any company beyond budgeting to a whole new level of competitiveness. Based on the decision-making needs of front-line managers, *Beyond Budgeting* enables readers to take advantage of two major opportunities: 1) a set of adaptive management processes that replace centrally controlled, predetermined goals with self-regulating, relative competitive benchmarks, and 2) the transfer of power and decision-making authority from the center of the organization to the front line.

This book presents the concept of value as the central component to success and longevity of the global ICT industry player, Huawei. It provides examples of how Huawei focuses on customers to pursue sustainable and profitable growth rather than focusing on capital market valuation, which is a familiar scenario among Western companies. It is the business departments that are the creators of value for Huawei, whereas the finance department is tasked to provide support and services to those business departments and oversee their operations during the value creation process. The book illustrates how Huawei Finance sets rules, allocates resources, and builds centers of expertise all over the world to address future uncertainties. More than a decade ago Huawei dedicated seven years to implement the Integrated Financial Services (IFS) Transformation Program with the help of IBM consultants. This book also draws on the leading concepts and successful experience of the IFS Transformation Program. Huawei Finance adopts

three types of centralized vertical management from the top down: treasury, accounting, and auditing. It does not transfer such central authority down to lower levels, but rather delegates all other authority to business organizations across all levels. This management model represents the focus of this book. Built on Value provides an overview of Huawei's finance management and will help academic researchers in Business/Management, as well as practitioners in industry, gain an accurate and in-depth understanding of Huawei as a company.
