Revised new 1997 edition gives expert advice on all aspects of river safety, covers latest gear and methods, and contains expanded material on big-water rescue -- the essential manual for every fast-water paddler.

The Humanure Handbook

This completely revised and updated edition with all new color photos brings together in a single volume the anchoring systems most popular among climbers. Most climbers today learn their craft on artificial climbing walls and on sport routes with fixed protection. Their first efforts to lead on trad routes often come as a rude shock--they find that they haven't the skills and training to safeguard the climb or to set up solid belays. This new edition of Climbing Anchors is the climber's complete and authoritative source of information on protection, from fundamental knots to sophisticated rigging and equalizing skills.

River Rescue

Vertical Academy

This book features selected papers from the 11th Asia-Oceania Symposium on Fire Science and Technology (AOSFST 2018), held in Taipei, Taiwan. Covering the entire

spectrum of fire safety science, it focuses on research on fires, explosions, combustion science, heat transfer, fluid dynamics, risk analysis and structural engineering, as well as other topics. Presenting advanced scientific insights, the book introduces and advances new ideas in all areas of fire safety science. As such it is a valuable resource for academic researchers, fire safety engineers, and regulators of fire, construction and safety authorities. Further it provides new ideas for more efficient fire protection.

The Outdoor Knots Book

The technological marvel that facilitated the Apollo missions to the Moon was the on-board computer. In the 1960s most computers filled an entire room, but the spacecraft's computer was required to be compact and low power. Although people today find it difficult to accept that it was possible to control a spacecraft using such a 'primitive' computer, it nevertheless had capabilities that are advanced even by today's standards. This is the first book to fully describe the Apollo guidance computer's architecture, instruction format and programs used by the astronauts. As a comprehensive account, it will span the disciplines of computer science, electrical and aerospace engineering. However, it will also be accessible to the 'space enthusiast'. In short, the intention is for this to be the definitive account of the Apollo guidance computer. Frank O'Brien's interest in the Apollo program began as a serious amateur historian. About 12 years ago, he

began performing research and writing essays for the Apollo Lunar Surface Journal, and the Apollo Flight Journal. Much of this work centered on his primary interests, the Apollo Guidance Computer (AGC) and the Lunar Module. These Journals are generally considered the canonical online reference on the flights to the Moon. He was then asked to assist the curatorial staff in the creation of the Cradle of Aviation Museum, on Long Island, New York, where he helped prepare the Lunar Module simulator, a LM procedure trainer and an Apollo space suit for display. He regularly lectures on the Apollo computer and related topics to diverse groups, from NASA's computer engineering conferences, the IEEE/ACM, computer festivals and university student groups.

Rope Rescue for Firefighting

Climbing Anchors

The Third Edition provides a comprehensive introduction to trench rescue, focusing on the knowledge and skills required to effectively perform rescues in a variety of trench environments.

Volunteer Stream Monitoring

Swiftwater Rescue 2nd Edition offers an in-depth look at swiftwater rescue for the professional -- firefighters, park rangers, law enforcement, EMS personnel -- as well as anyone who might be faced with the possibility of a flood or swiftwater rescue. Topics include rescuer safety considerations and equipment; river hydrology; equipment; shore-based, boat-based, and in-water rescue techniques; medical considerations; rigging for river rescue; incident command, animal rescue, and swiftwater training. Densely illustrated with line drawings and black & white photographs, the second edition also covers advanced subjects like the use of helicopters in swiftwater rescue and special situations like low-head dams, urban flooding, and flood channel rescues.

Trench Rescue

The most comprehensive, up-to-date and thoroughly researched book on the topic of composting human manure available anywhere. It includes a review of the historical, cultural and environmental issues pertaining to "human waste," as well as an in depth look at the potential health risks related to humanure recycling, with clear instructions on how to eliminate those dangers in order to safely convert humanure into garden soil. Written by a humanure composter with over thirty years experience, this classic work now includes illustrated, step-by-step instructions on how to build a humanure toilet, a chapter on alternative graywater systems, photos of owner-built humanure toilets from around the world, and an

overview of commercial composting toilets and systems.

* Climbing self-rescue procedures for teams of two - the most common climbing

party size * Techniques equally effective on rock, snow, and ice * Utilizes gear climbers already carry in their rack* Includes 40 one-page rescue scenarios and solutions for climbing accident analysis

The rope is stuck, or too short. A crucial piece of gear is MIA. You've wandered off route into dicey terrain. An injury leaves you or your partner in need of help. Climb long enough and finding yourself in a jam far from help is inevitable. In *Climbing: Self Rescue*, two long-time climbing instructors and guides teach how to improvise your own solutions, calling for outside help only when necessary. Because few climbers carry fancy (and expensive) search and rescue gear, all skills taught in this book use the items typically found on a climbing rack: rope, carabiners, slings, and cord. Text, illustrations, and photos explain knots, belaying and hauling systems, rappelling, ascension, passing knots, how to safely assist and rig an injured climber, and more. Roughly half of the book is devoted to real-life climbing scenarios and solutions ranging from moderate to severe. Because real-life situations rarely unfold as they do in practice, *Climbing Self-Rescue* teaches how to analyze and improvise your way out of a crisis.

Unroped scrambling over so-called easy terrain is one of the most potentially dangerous recreational activities. Every year, scramblers are injured or killed in preventable accidents. A Hiker's Guide to Scrambling Safely educates new scramblers in the inherent risks, required climbing skills and mountain knowledge required for safety in the mountains.

Falls from Height

Enables workplace responders to prepare for and respond to falls from height How do you rescue someone suspended in midair or trapped above ground? Author Loui McCurley, an expert in technical rope rescue with more than twenty-five years of experience, has the answers. Following her tested and proven advice, readers will learn how to prepare for and safely rescue "at-height" workers and others from

"falls from height." The book fully bridges the gap between planning and execution, steering readers toward simple workplace-specific solutions. Moreover, it explains how to develop and implement a comprehensive protection program, enabling all organizations and their employees to fully prepare themselves to respond to a fall from height. Falls from Height is divided into four parts: Part I: Regulatory Considerations, Rescue Plans, and Developing a Rescue Capability underscores the need for a rescue program, explaining how to fully leverage available resources to optimize the program. Part II: Equipment, Systems, and Skills details the skills that all rescuers should have and the equipment they need to perform a rescue at height. Part III: Putting It All Together discusses principles of rigging, single-rescuer methods, and group-rescuer methods. Part IV: Successful Workplace Planning examines the unique challenges of different workplace environments and then offers a step-by-step guide for implementing the book's recommendations. Based on the premise that a fallen worker must be rescued quickly and efficiently, without putting others in harm's way, Falls from Height is a must for all workplace responders, enabling them to prepare for and respond to fall victims like experienced rescuers.

"Apply the 2014 NFPA 1021 Standard to ensure fire officers are ready to take command! New technologies, operating procedures, information management

strategies, and many other factors impact today's fire service leaders. Fire officers must be prepared to address multiple challenges on the fireground, at the station, and in the community. Make sure personnel are ready to take command with up-to-date Job Performance Requirements (JPRs) in the 2014 NFPA 1021: Standard for Fire Officer Professional Qualifications. NFPA 1021 specifically identifies four levels of progression: Fire Officer Level I (supervisory); Fire Officer Level II (supervisory and managerial); Fire Officer Level III (managerial/administrative); Fire Officer Level IV (administrative)." -- provided by publisher.

manual is one of a series of manuals for aviation and ground personnel who perform helicopter sling load missions ashore or aboard ship. These manuals are a coordinated effort of the US Army, US Marine Corps, US Navy, US Air Force, and US Coast Guard. All services participate in the sling load certification program begun by the Army in 1984. These manuals include standardized rigging procedures and other information from that program. Efforts were made to standardize ground crew and hookup procedures and terminology. The terms "helicopter" and "aircraft" refer to vertical lift aircraft that participate in sling load operations. Where service-unique requirements apply to an entire chapter or body of text, the service initials are at the beginning of the chapter or text. Otherwise the initials are at the end of the applicable sentence. The information in this manual will familiarize personnel with the sling sets, cargo nets, and other sling load equipment in the DOD inventory. It will also acquaint them with the helicopters used for sling load and provide basic procedures for rigging and hooking up loads. Rigging equipment and procedures described in this manual may not be authorized for all aircraft or services because of equipment or service restrictions. This manual does not provide details on aviation operations nor does it present detailed data that is normally contained in unit standing operating procedures (SOPs).
