Of all the infantry small arms developed during World War II, one that generated the most interest was the German 'assault rifle', the StG 44 Sturmgewehr. This innovative weapon inspired the Soviet AK-47 in 7.62x39mm calibre. In the West, the NATO countries looked hard at new weapons to upgrade their own infantry arsenals and counter the AK-47, resulting in the design of the Fusil Automatique Léger or FAL. It proved to be a successful battle rifle and was soon adopted by the military and police forces of no fewer than 93 nations. The FAL dominated the militaries of the West to such a degree that its nickname became the Right Arm of the Free World. The FAL fulfilled every role it was asked to perform and remains a viable and well-respected weapon to this day.

Since World War II Americans' attitudes towards shyness have changed. The women's movement and the sexual revolution raised questions about communication, self-expression, intimacy, and personality, leading to new concerns about shyness. At the same time, the growth of psychotherapy and the mental health industry brought shyness to the attention of professionals who began to regard it as an illness in need of a cure. But what is shyness? How is it related to gender, race, and class identities? And

what does its stigmatization say about our culture? In *Shrinking Violets and Caspar Milquetoasts*, Patricia McDaniel tells the story of shyness. Using popular self-help books and magazine articles she shows how prevailing attitudes toward shyness frequently work to disempower women. She draws on evidence as diverse as 1950s views of shyness as a womanly virtue to contemporary views of shyness as a barrier to intimacy to highlight how cultural standards governing shyness reproduce and maintain power differences between and among women and men.

This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this

volume include protein and phospholipid methylations (Section A), nucleic acid methyl ations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design, synthesis, and biological evaluation of trans methylation inhibitors (Section E).
