How to Grow Up and Rule the World

"Petty signs with Ford!" Those four words tore through the racing world like a hot knife through butter while loyalists threw their hands up in disbelief. King Richard's defection was in part because Plymouth hadn't built a Dodge Daytona counterpart for the NASCAR circuit, in addition to the fact that Petty Enterprises wanted to be the sole racing parts distributor for Plymouth at the time. Plymouth weathered the backlash publically while privately scurrying to create a car to lure Richard back to Plymouth. That car? The 1970 Plymouth Superbird. Production models languished on salesroom floors due in part to NASCAR having increased the homologation requirement from 500 units to 2,000. These cars were highly specialized, seen as being in excess in proportion to the hottest street cars of the period. Fast-forward to today, Superbirds are highly collectible and are the star attractions at car shows and auctions, pulling top dollar and generating real excitement. What a difference a few decades makes! Each volume in the In Detail Series provides an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, an in-depth study of all hardware and available options, and an examination of where the car is on the market today. Also included are paint and option codes, VIN and build tag decoders, as well as production numbers.

Should we care that wealth in the United States is unequally distributed " and getting more so every year? Should we worry that America's most wealthy, in just a generation, have more than doubled their share of the nation's wealth?Our nation's highest leaders certainly don't think so. They either ignore, or dismiss, the

huge gaps in income and wealth that divide us. But these gaps, author Sam Pizzigati shows in his compelling new book, are undermining nearly every aspect of our lives, from our health to our happiness, from our professions to our pastimes, from our arts to our Earth. Greed and Good both reveals the horrific price we pay for tolerating inequality and dissects the case for greed, the old saws that apologists for inequality regularly trot out to justify the mammoth concentrations of wealth that tower all around us. These concentrations, Greed and Good argues, can and must be cut down to democratic size. And Greed and Good, in clear-headed and fascinating prose, even shows how.

Comeback

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

A Newsday Best Cookbook of 2007: can a recipe change your life? A quest for an authentic dish reveals a mythic love story and age-old culinary secrets. James Beard Award-winning author Laura Schenone undertakes a quest to retrieve her great grandmother's ravioli recipe, reuniting with relatives as she goes. In lyrical prose and delicious recipes, Schenone takes the reader on an unforgettable journey from the grit of New Jersey's industrial wastelands and the fast-paced disposable culture of its suburbs to the dramatically beautiful coast of Liguria—the family's homeland—with its pesto, smoked chestnuts, torte, and, most beloved of all, ravioli, the food of celebration and happiness. Schenone discovers the persistent importance of place, while offering a perceptive voice on immigration and ethnicity in its twilight. Along the way, she gives us the comedies and foibles of family life, a story of love and loss, a deeper understanding of the bonds between parents and children, and the mysteries of pasta, rolled into a perfect circle of gossamer dough.

Automotive News

GIs returning after World War II created an entirely new automotive market niche when they bought surplus Jeeps and began exploring the rugged backcountry of the American West. This burgeoning market segment, which eventually became known as sport utility vehicles (SUVs), numbered about 40,000 units per year with

offerings from Jeep, Scout, Toyota, and Land Rover. In 1966, Ford entered the fray with its Bronco, offering increased refinement, more power, and an innovative coil-spring front suspension. The Bronco caught on quickly and soon established a reputation as a solid backcountry performer. In Baja, the legendary accomplishments of racers such as Parnelli Jones, Rod Hall, and Bill Stroppe further cemented the bobtail's reputation for toughness. Ford moved upstream with the introduction of the larger Bronco for 1978, witnessing a huge increase in sales for the second-generation trucks. The Twin Traction Beam front end was introduced in the third generation, and further refinements including more aerodynamic styling, greater luxury, and more powerful fuel-injected engines came on board in the generations that followed. Through it all, the Bronco retained its reputation as a tough, versatile, and comfortable rig, both on and off the paved road. With the reintroduction of the Bronco for 2020, Ford is producing a vehicle for a whole new generation of enthusiasts that looks to bring modern styling and performance to the market while building on the 30-year heritage of the first five generations of the Bronco so dearly loved by their owners. From the development process and details of the first trucks through the 1996 models, author Todd Zuercher shares technical details, rarely seen photos, and highlights of significant models along with the stories of those people whose lives have been intertwined with the Bronco for many years. This book will have new information for everyone and will be a must-have for longtime enthusiasts and new owners alike! p.p1 {margin: 0.0px 0.0px 0.0px; font: 12.0px Arial; color: #000000}

With contributions from around the world and utilizing a wide range of styles and approaches including ethnographic studies, personal accounts and interviews, the book asks three fundamental questions: What have been the costs to children of the war on drugs? Children of the Drug War

Off-grid isn't a state of mind. It isn't about someone being out of touch, about a place that is hard to get to, or about a weekend spent offline. Off-grid is the property of a building (generally a home but sometimes even a whole town) that is disconnected from the electricity and the natural gas grid. To live off-grid, therefore, means having to radically re-invent domestic life as we know it, and this is what this book is about: individuals and families who have chosen to live in that dramatically innovative, but also quite old, way of life. This ethnography explores the day-to-day lives of people in each of Canada's provinces and territories living off the grid. Vannini and Taggart demonstrate how a variety of people, all with different environmental constraints, live away from contemporary civilization. The authors also raise important questions about our social future and whether off-grid living creates an environmentally and culturally sustainable lifestyle practice. These homes are experimental labs for our collective future, an intimate look into unusual contemporary domestic lives, and a call to the rest of us leading ordinary lives to examine what we take for granted. This book is ideal for courses on the environment and sustainability as well as introduction to sociology and introduction to cultural anthropology courses.

An NPR Best Book of 2015 Love and sacrifice intertwine in this brilliant debut of rare beauty about a girl dealing with her mother's schizophrenia and her own mental illness. Fig's world lies somewhere between reality and fantasy. But as she watches Mama slowly come undone, it becomes hard to tell what is real and what is not, what is fun and what is frightening. To save Mama, Fig begins a fierce battle to bring her back. She knows that her daily sacrifices, like not touching metal one day or avoiding water the next, are the only way to cure Mama. The problem is that in the process of a daily sacrifice, Fig begins to lose herself as well, increasingly isolating herself from her classmates and engaging in self-destructive behavior that only further sets her apart. Spanning the course of Fig's childhood from age six to nineteen, this deeply provocative novel is more than a portrait of a mother, a daughter, and the struggle that comes with all-consuming love. It is an acutely honest and often painful portrayal of life with mental illness and the lengths to which a young woman must go to handle the ordeals—real or imaginary—thrown her way.

Energy Research at DOE

In legislation appropriating funds for DOE's fiscal year (FY) 2000 energy R&D budget, the House Interior Appropriations Subcommittee directed an evaluation of the benefits that have accrued to the nation from the R&D conducted since 1978 in DOE's energy efficiency and fossil energy programs. In response to the congressional charge, the National Research Council formed the Committee on Benefits of DOE R&D on Energy Efficiency and Fossil Energy. From its inception, DOE's energy R&D program has been the subject of many outside evaluations. The present evaluation asks whether the benefits of the program have justified the considerable expenditure of public funds since DOE's formation in 1977, and, unlike earlier evaluations, it takes a comprehensive look at the actual outcomes of DOE's research over two decades.

Greed and Good

In *Comeback*, Pulitzer Prize-winners Paul Ingrassia and Joseph B. White take us to the boardrooms, the executive offices, and the shop floors of the auto business to reconstruct, in riveting detail, how America's premier industry stumbled, fell, and picked itself up again. The story begins in 1982, when Honda started building cars in Marysville, Ohio, and the entire U.S. car industry seemed to be on the brink of extinction. It ends just over a decade later, with a remarkable turn of the tables, as Japan's car industry falters and America's Big Three emerge as formidable global competitors. *Comeback* is a story propelled by larger-than-life characters -- Lee Iacocca, Henry Ford II, Don Petersen, Roger Smith, among many others -- and their greed, pride, and sheer refusal to face facts. But it is also a story full of dedicated, unlikely heroes who struggled to make the Big Three change before it was too late.

Over the past ten years, there has been growing interest in the process of strategic decision-making among both managers and researchers. Strategic decisions are important for five main reasons: They are large-scale, risky and hard to reverse; they are a bridge between deliberate and emerging strategies; they can be a major source of organizational learning; they play an important part in the development of individual managers and they cut across functions and academic disciplines. *Strategic Decisions* summarizes the current state of the art in research on strategic decision-making, with chapters prepared by leading strategy researchers. The editors also present implications for current application and proposed directions for future research.

Most innovations in the car industry are based on software and electronics, and IT will soon constitute the major production cost factor. It seems almost certain that embedded IT security will be crucial for the next generation of applications. Yet whereas software safety has become a relatively well-established field, the protection of automotive IT systems against manipulation or intrusion has only recently started to emerge. Lemke, Paar, and Wolf collect in this volume a state-of-the-art overview on all aspects relevant for IT security in automotive applications. After an introductory chapter written by the editors themselves, the contributions from experienced experts of different disciplines are structured into three parts. "Security in the Automotive Domain" describes applications for which IT security is crucial, like immobilizers, tachographs, and software updates. "Embedded Security Technologies" details security technologies relevant for automotive applications, e.g., symmetric and asymmetric cryptography, and wireless security. "Business Aspects of IT Systems in Cars" shows the need for embedded security in novel applications like location-based navigation systems and personalization. The first book in this area of fast-growing economic and scientific importance, it is indispensable for both researchers in software or embedded security and professionals in the automotive industry.
