Party autonomy is a subject that is traditionally rejected in the field of property law. Legal systems throughout Europe and most parts of the world still found their property law on the *lex situs*. This point of view, however, is challenged more and more. The immense intensification of worldwide trade may have turned boundaries between countries into barriers in a world that needs flexibility. This book deals with important questions concerning this problem, including: What happens to property rights related to movables and claims when borders are crossed? Do we recognize a German retention of title or an American security right? Which law will apply: the law of the country of origin, the *lex situs* or the law of the country of destination? How does legislation concerning financial instruments relate to the problem, and what is it all worth in insolvency situations?

This text provides a comprehensive guide to the principles of European contract

law. They have been drawn up by an independent body of experts from each Member State of the EU, under a project supported by the European Commission and many other organizations. The principles are stated in the form of articles, with a detailed commentary explaining the purpose and operation of each article and its relation to the remainder. Each article also has extensive comparative notes surveying the national laws and other international provisions on the topic.

The book highlights the link between consumers and travellers, identifying the meaning of vulnerability in Brazil and the EU. It also covers different types of contracts for tourism and travel services, including online booking processes. Only after 2015, as a result of the directive on package travel and linked travel arrangements, did the EU begin viewing travellers as consumers in the sense of Union Consumer Law; conversely, in Brazil, the traveller has no legal status whatsoever and is considered solely a consumer. As the traveller is implicitly a consumer he/she is subject to vulnerability. However, the definition of vulnerability differs considerably between Brazil and the EU: while in Brazil it is a principle stemming from the Consumer Defence Code, covering all consumers, in the EU vulnerability is not an established principle. In the EU, although the average consumer is assumed to be reasonably well informed, observant and circumspect, they are also recognised as the weaker party in the contract. That recognition does not fit with the notion of "confident consumer". Vulnerable consumers in the EU are those whose individual characteristics, such as their age, physical or mental infirmity, or credulity, make them particularly susceptible to unfair commercial practices. Conversely, in Brazil these consumers are seen as being hyper-vulnerable, rather than solely vulnerable. In this context, travellers are in a weaker position than regular consumers buying goods or services, because they are outside of their domicile or jurisdiction for a brief or extended period of time. This book examines two types of traveller vulnerability that make travellers, particularly international ones, a special type of consumers: 1. External and 2. Legal (jurisdiction). Travellers' vulnerability mainly stems from consumers travelling to different markets and different cultures. As such, they are subject to different laws that require special global attention. While both the EU and Brazilian system have their respective advantages and disadvantages, the goal of both must be to further increase protection for travellers, including business travellers. In consumer

societies, the traveller is indeed a consumer by logical causation and hence a “special consumer”.

Forensic Medicine encompasses all areas in which medicine and law interact. This book covers diverse aspects of forensic medicine including forensic pathology, traumatology and violent death, sudden and unexpected death, clinical forensic medicine, toxicology, traffic medicine, identification, haemogenetics and medical law. A knowledge of all these subdisciplines is necessary in order to solve routine as well as more unusual cases. Taking a comprehensive approach the book moves beyond a focus on forensic pathology to include clinical forensic medicine and forensic toxicology. All aspects of forensic medicine are covered to meet the specialist needs of daily casework. Aspects of routine analysis and quality control are addressed in each chapter. The book provides coverage of the latest developments in forensic molecular biology, forensic toxicology, molecular pathology and immunohistochemistry. A must-have reference for every specialist in the field this book is set to become the bench-mark for the international forensic medical community.

Nobody denies that the traditional territorial approach to copyright and other intellectual property rights has come under pressure. Yet it persists. Faced with the need to determine the applicable law in cross-border cases, lawyers everywhere wrestle with the implications of the territorial nature of copyright and related rights. In this book Mireille van Eechoud clears the way to the formulation of conflict rules that reflect the purpose of copyright law- to protect creators and stimulate the production and use of information- without reverting to old-fashioned notions of territoriality. She shows how the applicable law can be determined for four distinct legal avenues of intellectual property law: Which exclusive rights exist in an intellectual creation and for how long; Who is considered to own such right; How can these rights be transferred; and What constitutes infringement of copyright and related rights. Mireille van Eechoud shows how, when each of these questions is approached in the light of the different allocation principles used in modern choice of law, a new clarity begins to emerge that promises in time to build a set of conflict rules well suited to the unprecedented copyright and related rights issues that we find so difficult to resolve today. Her in-depth analysis draws in the classic multilateral conventions and treaties, underlying policies, technological and economic developments, utilitarian grounds versus justice considerations, and issues of infringement in the digital environment.
