"Roughly one of every three Americans has some form of cardiovascular disease (CVD), including more than 70 per cent of persons older than 75 years of age. Long associated with increased risk for mortality and disability, CVD is also a major risk factor for stroke and cerebrovascular disease. There has been growing consensus that CVD is also an important contributor to poor neurocognitive outcome in its own right. Numerous studies now link CVD to accelerated cognitive decline, structural and functional brain abnormalities, including neurodegenerative conditions in the elderly. This book was written to provide up-to-date insight into these heart-brain connections and the neuropsychology of CVD. Both clinicians and researchers in neuropsychology, health psychology, cardiology, neurology, psychiatry, geriatrics and many others will find this book an important

resource."--Back cover.

It integrates key concepts of pathophysiology, clinical manifestations, diagnostic tests and laboratory information and findings with clinically important medical and surgical interventions and

pharmacologic therapies — then applies the material to physical therapy evaluation and treatment. This edition adds an introductory chapter on the oxygen transport pathway, the effects of dysfunction along the pathway, and the implications for physical therapy. Boko Haram's appetite for violence and kidnapping women has thrust them to the top of the global news agenda. In a few years they all but severed parts of Nigeria-Africa's most populous state and largest economy-from the hands of the government. When Boko Haram speaks, the world sees a grimacing ranting demagogue who taunts viewers claiming he will 'eat the heart of the infidels' and calling on Nigerians to reject their corrupt democracy and return to a 'pure' form of Islam. Thousands have been slaughtered in their campaign of purification which has evolved through a five-year bloody civil war. Civilians are trapped between the militants and the military and feel preyed upon by both. Boko Haram did not emerge fully formed. In Northern Nigeria, which has witnessed many caliphates in the past,

radical ideas flourish and strange sects are common. For decades, Nigeria's politicians and oligarchs fed on the resources of a state buoyed by oil and turned public institutions into spoons for the pot. When the going was good it didn't matter. But now a new ravenous force threatens Nigeria.

Hurst's the Heart Manual of Cardiology, 12th Edition

"This second edition also has new content on the effects of aging, lung volume reduction surgery and lung transplantation, metabolic syndrome, the 6-minute walk test, simple anthropometric measurements for determination of obesity, health and fitness appraisals, quality of life

measures, and more. The clinical implications for physical therapists are described throughout the book." --Book Jacket.

(McGraw-Hill, 2008), as the original intent of the authors). The chapters are short, succinct, and well written. The handbook makes excellent use of tables, algorithms, diagrams, and figures to synthesize key aspects of cardiovascular disease and care. Treatment recommendations take into account current ACC/AHA Clinical Practice Guidelines and are very specific about the indications for therapy.
