IAHCSMM Endoscope Reprocessing Manual Workbook

Praise for *Powerful Techniques for Teaching Adults* "Stephen Brookfield has used his gifts for clear thinking and lucid writing to produce this theoretically informed, immensely practical book on how the dynamics of power and adult teaching intersect. It should be required reading for everyone who teaches adults." ??—Ronald M. Cervero, professor and associate dean, College of Education, University of Georgia "In one of his most personal, emotionally candid, and accessible books yet, Stephen Brookfield shares his passionate and indispensable commitment to empowering the learner both inside and outside the formal classroom, offering a trove of exercises, stories, and practical teaching tips to confront the hidden curriculum of power head on. For any teacher, coach, supervisor, or mentor who cares deeply about adult learning, here's a true gem from one of our great contemporary adult educators."—Laurent A. Parks Daloz, senior

fellow, The WhidbeyInstitute "This book is not about increasing your power as a teacher— it is about the dynamics of power in the adult classroom, challenging power structures, and the techniques teachers can use to empower learners. Brookfield's uses the lens of 'power' to distill, for the practitioner, ??a lifetime's work of scholarly and practical engagement with adult teaching and learning.'—Mark Tennant, emeritus professor, University of Technology, Sydney, Australia "Brookfield writes in a nice easy-to-read autobiographical style. He explains and fully discusses many good techniques for teaching in an effective and humane manner. Everybody who teaches, whether they teach children or adults, will benefit from reading this interesting book and learning from his lifetime of experience as a teacher." —Peter Jarvis, emeritus professor of continuing education, University of Surrey

Operating Room Skills

IAHCSMM is pleased to introduce the Instrument Resource Manual. This text was written for CS Instrument technicians, by CS Instrument technicians. That focus makes it a unique resource for every CS department. Emphasis has been placed on good work practices for instrument care and handling; including instrument inspection points, testing processes and other information that will enhance instrument skills. The Instrument Resource Manual provides a realistic look at surgical instrument inspection. Photos for the text were gathered from several sources and show instruments at varying stages in their life cycle. Some are new, and others are nearing, or at, the end of use. In other words, the photos in this text provide a snapshot of the devices instrument technicians encounter daily. Each healthcare facility is unique and instrument tray content is driven by surgeon and OR staff input. For that reason, tray content varies. It is impossible to include every surgical instrument in use in a single text. This text has attempted to include commonly used instruments. The Instrument Resource Manual is designed to be user-friendly and an invaluable resource to Instrument technicians in any facility. Some features include:

- Learning objectives that introduce each chapter and outline learning expectations in the chapter.
- Use of green text boxes to define key terms throughout the text.
- Use of red arrow indicators to identify key inspection points on instruments.
- A glossary that not only defines all the terms introduced in the manual, but also many other terms important in today's dynamic CS

The AAMI recommended practice, Comprehensive guide to steam sterilization and sterility assurance in health care facilities, is a breakthrough standard in terms of its scope. AAMI has updated ST79 with the release of ST79:2010/A4:2013. Of particular importance, A4:2013 provides four new figures demonstrating the wrapping of items for steam sterilization and adds an annex focused on Moisture assessment. As of Oct. 25, 2013, purchasers of ST79 will receive ANSI/AAMI ST79:2010 and A1:2010 and A2:2011 and A3:2012 and A4:2014 as a single consolidated document. Among other changes from the 2006 edition of ST79, this revised and expanded second edition of ST79 includes guidance on the use and application of Class 6 emulating indicators, a chemical monitoring device fairly new to the United States. Because ST79 essentially consolidates five AAMI steam sterilization standards (whose content was reviewed and updated to reflect current good practice prior to being incorporated into ST79), it truly is a comprehensive guideline for all steam sterilization activities in healthcare facilities, regardless of the size of the sterilizer or the size of the facility, and provides a resource for all healthcare personnel who use steam for sterilization.

The primary functions of a sterile services department (SSD) of a hospital include the disassembly and disinfection of instruments used in surgical or medical procedures carried out in operating theatres and other clinical areas; and the preparation and packaging of sterile instrument packs and trays for clinical use, including device functionality and safety checks. This publication contains guidance on the planning and design of a sterile services department (SSD) and service requirements involved. It replaces and builds upon the 1993 edition (011321412X). Emphasis is placed upon centralising the decontamination of surgical instruments into purpose-built departments; operating in facilities with appropriately segregated processes and effective environmental control; and calculating optimum capacity to eradicate bottlenecks (using a simulation model given on an accompanying CD-ROM); cost information and engineering services.

Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries. In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US \$10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in

existing national guidelines. These new WHO guidelines are valid for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.
