This volume brings together the findings from separate studies of community-based and school-based mentoring to unpack the common response to the question of what makes youth mentoring work. A debate that was alive in 2002, when the first *New Directions for Youth Development* volume on mentoring, edited by Jean Rhodes, was published, centers on whether goal-oriented or relationship-focused interactions (conversations and activities) prove to be more essential for effective youth mentoring. The consensus appeared then to be that the mentoring context defined the answer: in workplace mentoring with teens, an instrumental relationship was deemed essential and resulted in larger impacts, while in the community setting, the developmental relationship was the key ingredient of change. Recent large-scale studies of school-based mentoring have raised this question once again and suggest that understanding how developmental and instrumental relationship styles manifest through goal-directed and relational interactions is essential to effective practice. Because the contexts in which youth mentoring occurs (in the community, in school during the day, or in a structured program after school) affect what happens in the mentor-mentee pair, our goal was to bring together a diverse group of researchers

to describe the focus, purpose, and authorship of the mentoring interactions that happen in these contexts in order to help mentors and program staff better understand how youth mentoring relationships can be effective. This is the 126th issue of New Directions for Youth Development the Jossey-Bass quarterly report series dedicated to bringing together everyone concerned with helping young people, including scholars, practitioners, and people from different disciplines and professions. The result is a unique resource presenting thoughtful, multi-faceted approaches to helping our youth develop into responsible, stable, well-rounded citizens.

Walker's Manual of Western Corporations

The Handbook of Youth Mentoring provides the first scholarly and comprehensive synthesis of current theory, research, and practice in the field of youth mentoring. Editors David L. DuBois and Michael J. Karcher, along with leading experts in the field, offer critical and informative analyses of the full spectrum of topics that are essential to advancing our understanding of the principles for effective mentoring of young people. The Handbook explores not only mentoring that occurs within formal programs such as Big Brothers Big Sisters, but also examines natural mentoring relationships that youth establish with adults outside of such programs.

A blended learning approach to automotive engineering at levels one to three. Produced alongside the ATT online learning resources, this textbook covers all the theory and technology sections that students need to learn in order to pass levels 1, 2 and 3 automotive courses. It is recommended by the Institute of the Motor Industry and is also ideal for exams run by other awarding bodies. Unlike the current textbooks on the market though, this title takes a blended learning approach, using interactive features that make learning more enjoyable as well as more effective. When linked with the ATT online resources it provides a comprehensive package that includes activities, video footage, assessments and further reading. Information and activities are set out in sequence so as to meet teacher and learner needs as well as qualification requirements. Tom Denton is the leading UK automotive author with a teaching career spanning lecturer to head of automotive engineering in a large college. His nine automotive textbooks published since 1995 are bestsellers and led to his authoring of the Automotive Technician Training multimedia system that is in common use in the UK, USA and several other countries.

Convex Optimization

Bibliographic Guide to Business and Economics

Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Duality and approximation techniques are then covered, as are statistical estimation techniques. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods. The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics.

From the reviews: "All in all, Graham Borradaile has written an interesting and idiosyncratic book on statistics for geoscientists that will be welcome among students, researchers, and practitioners dealing with orientation data. That should include engineering geologists who work with things like rock fracture orientation measurements or clast alignment in paleoseismic trenches. It won't replace the collection of statistics and geostatistics texts in my library, but it will have a place among them and will likely be one of several references to which I turn when working with orientation data. The text is easy to follow and illustrations are generally clear and easy to read"(William C. Haneberg, Haneberg Geoscience)
