In the early nineteenth century China remained almost untouched by British and European powers - but as new technology started to change this balance, foreigners gathered like wolves around the weakening Qing Empire. Would the Chinese suffer the fate of much of the rest of the world, carved into pieces by Europeans? Or could they adapt rapidly enough to maintain their independence? This important and compelling book explains the roots of China's complex relationship with the West by illuminating a dramatic, colourful and sometimes shocking period of the country's history.

The book shows how the Chinese are now confident of their capacity to learn all they need from the developed world and are keen to know which parts of the past they would need to build a modern Chinese civilization. They are very conscious of the challenges coming from the United States, and are looking for ways and means to respond to a superpower that wants to preserve its dominant position in the international status quo. The book seeks to explain what China is doing and what its immediate and long-term interests are. It is not to defend or judge China. It does not employ theoretical frameworks that are not appropriate for describing Chinese conditions. It calls for understanding why history is particularly relevant to the Chinese state and most of its people. That way, we also see how the present and hopes for the future changes our perspectives of the past. Related Link(s)

The story takes place on the China coast during World War II. A freighter, sailing offshore under the Panamanian flag and laden with war materiel, intercepts the stunning news of Pearl Harbor. The two young American officers, Captain Henry Budrow and Third Mate David Kopel, are shocked to find themselves in enemy waters. This is the saga of their wartime exploits: a sea battle for the cargo, their capture, the Captain's imprisonment and David's internment in Shanghai. With odds against them, they escape, plan and execute a series of fiery attacks upon Japanese military targets. It is also the story of Kate, a lovely and spirited young English girl who, torn from her reception desk at the British Embassy, is forced to live out the long war years in the internment camp. Kate and a thousand fellow Allied prisoners face their long ordeal with courage and endurance. The two men compete for Kate's affections, carry out their strikes against the Japanese with ingenuity and daring. Their final stratagem: a spy mission into Japanese waters on a Chinese junk, is thwarted by Fat Man, the second atom bomb, dropped on Nagasaki.

Trees outside forests (including fruit trees, trees in parks, fields, those growing in the wild and as amenities), together with forests and other woodlands, contribute to the structure of the landscape, generate numerous environmental and social services, and yield important food, drink and fuel products as well as meeting other domestic needs of urban and rural populations. However, trees outside forests are not well documented and receive little attention in the formulation of national forestry policy and planning. This publication seeks to fill this gap, by providing information on the role of these resources and options for their integration in territorial management policies.
