The 2015 edition of ISO 9001 has been modernized to update terminology and content to meet current and anticipated user needs. The major emphasis of ISO 9001:2015 is still consistent provision of products and services that meet customer and applicable statutory and regulatory requirements. This book explains the meaning and intent of the requirements of ISO 9001:2015 and discusses the requirements as they relate to each of the product categories. Where appropriate, it includes an elaboration of why the requirements are important. It also includes typical audit-type questions that an organization may consider to assess conformity to internal needs and ISO 9001 requirements. Recommendations for implementation are also included. This book addresses the needs of: Users and organizations seeking a general understanding of the contents of ISO 9001:2015 Users and organizations desiring guidance to ensure their ISO 9001:2015 QMS meets the new version requirements Users and organizations considering the use of ISO 9001:2015 as a foundation for the development of a comprehensive QMS Educators who require a textbook to accompany a training class or course on ISO 9001:2015 Auditors who desire to increase their level of auditing competence Authors Cianfrani and West, members of the expert group that developed ISO 9001:2015, strive to provide a context for all requirements to enable you to develop and deploy processes that will strengthen your QMS. Getting or retaining a certificate is not the real objective.

Satisfied customers and organizational sustainability should be primary objectives for the organization.

SCIENCE AND EMPIRES: FROM THE INTERNATIONAL COLLOQUIUM TO THE BOOK Patrick PETITJEAN, Catherine JAMI and Anne Marie MOULIN The International Colloquium "Science and Empires - Historical Studies about Scientific Development and European Expansion" is the product of an International Colloquium, "Sciences and Empires - A Comparative History of Scientific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries". Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Roshdi Rashed who initiated this field of studies in France some years ago, and proposed "Sciences and Empires" as one of the main research programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. endeavours to provide concepts, text and cases for a course on Security Analysis and Portfolio Management, which is widely taught in the business schools around the world. It is consciously planned to help students to acquire knowledge, develop analytical skills and gain insights pertaining to how a fund manager strikes winning strategies for investment by using time-tested, validated and proven techniques which ranges from fundamental analysis to mundane mathematical models. The book is divided in four broad parts. " Part One describes the global investment scenario, major investment decisions, and the dynamics of the securities markets. " Part Two deals with the critical aspects of risk and return culminating in Capital Asset Pricing Model (CAPM). " Part Three discusses the most important analysis in investment decisions, wherein good mathematical models are factored in and applied to live conditions through building up case analysis. " Part Four deals with the exotic instruments of derivatives and its applications, where cutting-edge research around the globe is going on. The book is designed to meet the expectations of common investors as well as hard core professionals (fund managers) in putting the precious resources at risk for higher returns. New in this edition: The following chapters are added to make the book more result oriented, contemporary, focused and comprehensive. computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
