The auditing environment continues to change in dramatic ways, and graduates entering the profession must be prepared for a high standard of responsibility. You can prepare for these changes by using Johnstone/Gramling/Rittenberg's A RISK-BASED APPROACH TO CONDUCTING QUALITY AUDITS, 9th EDITION. AUDITING 9e reflects the clarified auditing standards and the newest PCAOB standards, discusses COSO's updated Internal Control-Integrated Framework, integrates discussion of fraud risk throughout the text, and features end-of-chapter problems that will help you prepare for exams and understand real-life auditing scenarios. AUDITING 9e will help you understand the full range of auditing issues in the evolving global environment. The ninth edition continues to provide engineers with an accessible resource for learning calculus. The book includes carefully worked examples and special problem types that help improve comprehension. New applied exercises demonstrate the usefulness of the mathematics. Additional summary tables with step-by-step details are also incorporated into the chapters to make the concepts easier to understand. The Quick Check and Focus on Concepts exercises have been updated as well. Engineers become engaged in the material because of the easy-to-read style and real-world examples.

Tourism, the worlds fastest growing industry, is now entering a more mature phase. During the 1970s and 1980s mass tourism, with its rigid, standardized packages, developed rapidly and provided many consumers with their first experiences of international travel. Today, a complex and multi-faceted industry, tourism faces growing pressures - consumer demand for more individually tailored holidays, an increasingly competitive operational environment, opportunities provided by new technology and growing environmental concerns. This book analyses the major challenges facing tourism today. The author highlights the

central role of information technology in creating mass tourism by the mid-1970s, and how this technology and innovation is creating a new best practice of flexibility, market segmentation and diagonal integration within tourism. The book demonstrates how companies in the industry can enhance their competitiveness in the market place. Aimed at both academics and industry practitioners, this original and challenging work will attract a wide readership.

Drops and Bubbles in Interfacial Research

This book is an in-depth examination of the much needed process of “self” study known as self observation. We live in an age where the “attention function” in the brain has been badly damaged by TV and computers-up to 90 percent of the public under age 35 suffers from attention-deficit disorder! This book offers the most direct, non-pharmaceutical means of healing attention dysfunction. The methods presented here are capable of restoring attention to a fully functional and powerful tool for success in life and relationships. This is also an age when humanity has lost its connection with conscience. When humanity has poisoned the Earth’s atmosphere, water, air and soil, when cancer is in epidemic proportions and is mainly an environmental illness, the author asks: What is the root cause? And he boldly answers: Failure to develop conscience! Selfobservation, he asserts, is the most ancient, scientific, and proven means to develop this crucial inner guide to awakening and a moral life. This book is for the lay-reader, both the beginner and

the advanced student of self observation. No other book on the market examines this practice in such detail. There are hundreds of books on self-help and meditation, but almost none on self-study via self-observation, and none with the depth of analysis, wealth of explication, and richness of experience which this book offers. Red Hawk, author of 5 collections of poetry, was the Hodder Fellow at Princeton University (1992-93) and is currently a full professor at the University of Arkansas, Monticello. He has practiced self-observation for over 30 years, under the guidance of the Gurdjieff Society of Arkansas, meditation master Osho Rajneesh, and spiritual teacher, Lee Lozowick.

ORACLE 11G: SQL is an introduction to the fundamental SQL language used in all relational databases today. This textbook is not simply a study guide; it is written for those who have just a basic knowledge of databases and can be used in a course on this latest implementation of SQL from Oracle. Learning these concepts and techniques prepares students for the first exam in both the Oracle Database Administrator and Oracle Developer Certification Exam paths and offers a solid understanding of using Oracle 11g SQL effectively. The first part of ORACLE 11G: SQL focuses on creating database objects, including tables, constraints, indexes, sequences, synonyms, and users, and manipulating data. The second part explores data query techniques, such as row filtering, joins, single-row functions, aggregate

functions, subqueries, and views. Several advanced query topics, such as ROLLUP, CUBE, and TOP-N analysis, are also introduced. To help students bridge these SQL topics to further studies, appendixes introduce SQL tuning, compare Oracle's SQL syntax with other databases (MS SQL Server and MySQL), and explain how to embed SQL in applications (ASP.NET). An overview of the two Oracle connection interface tools, SQL Developer and SQL Plus, is also provided. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Highlights of the book: Discussion about all the fields of Computer Aided Engineering, Finite Element Analysis Sharing of worldwide experience by more than 10 working professionals Emphasis on Practical usage and minimum mathematics Simple language, more than 1000 colour images International quality printing on specially imported paper Why this book has been written FEA is gaining popularity day by day & is a sought after dream career for mechanical engineers. Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books. Often professionals realize that they are not in touch with theoretical concepts as being pre-requisite and find it too mathematical and Hi-Fi. Many a times these books just end up being decoration in their book shelves All the authors of this book are from IITs & IISc and after joining the industry realized gap between university education and the practical FEA. Over the years they learned it via interaction with experts from international community, sharing experience with each other and hard route of trial & error method. The basic aim of this book is to share the knowledge & practices used in the industry with experienced and in particular beginners so as to reduce the learning curve & avoid reinvention of the cycle. Emphasis is on simple language, practical usage, minimum mathematics & no pre-

requisites. All basic concepts of engineering are included as & where it is required. It is hoped that this book would be helpful to beginners, experienced users, managers, group leaders and as additional reading material for university courses.

(Note: a new file with improved images was uploaded 02/19/15) Effective LabVIEW Programming by Thomas Bress is suitable for all beginning and intermediate LabVIEW programmers. It follows a “teach by showing, learn by doing” approach. It demonstrates what good LabVIEW programs look like by exploring a small set of core LabVIEW functions and common design patterns based on a project drawn from the Certified LabVIEW Developer exam. These patterns build on each other. They provide a firm starting point for most beginning and intermediate projects. Overall, the presentation emphasizes how to use the dataflow paradigm of LabVIEW to create effective programs that are readable, scalable and maintainable. The concepts presented in this book are reinforced by eleven problem sets with full solutions. This book will improve your fluency in LabVIEW and, in the process, will teach you how to “think” in LabVIEW. Visit <http://www.ntspress.com/publications/effective-labview-programming/> for

The Business Writer's Handbook

Like stars, societies are born, and this story deals with such a birth. It asks a fundamental and compelling question: How did societies first coalesce from the small foraging communities that had roamed in West Central Africa for many thousands of years? Jan Vansina continues a career-long effort to reconstruct the history of African societies before European contact in *How Societies Are Born*. In this complement to his previous study *Paths in the Rainforests*, Vansina employs a provocative combination of archaeology and historical linguistics to turn his scholarly focus to governance, studying the creation of relatively large societies extending beyond the foraging groups that characterized west central Africa from the beginning of human habitation to around 500 BCE, and the institutions that bridged their constituent local communities and made large-scale cooperation possible. The increasing reliance on cereal crops, iron tools, large herds of cattle, and overarching institutions such as corporate matrilineages and dispersed matriclans lead up to the developments treated in the second part of the book. From about 900 BCE until European contact, different societies chose different developmental paths. Interestingly, these proceeded well beyond environmental constraints and were characterized by "major differences in the subjects which enthralled people," whether these were cattle, initiations and social position, or

"the splendors of sacralized leaders and the possibilities of participating in them."

Discovering the Humanities helps students see context and make connections across the humanities by tying together the entire cultural experience through a narrative storytelling approach. Pearson Prentice Hall is proud to offer Discovering the Humanities-the new brief version of The Humanities: Culture, Continuity, and Change adapted by author Henry Sayre himself. Discovering the Humanities continues to help students see the big picture and make important connections through Henry Sayre's captivating narrative that has made the comprehensive text successful at schools across the nation. Henry Sayre took the introduction to the humanities course as a sophomore and was inspired to devote his life to the study of the humanities. He has always wanted to write a book that passes along the important and compelling stories of the humanities. Henry believes that students learn best by remembering stories, not by memorizing facts. What makes Discovering the Humanities special is that it tells the stories and captures the voices that have shaped and influenced human thinking and creativity.

Stubborn food critic Miranda Storme has reached her limit with infuriating restaurateur Gavin Luciano. Nicknaming her Red was just the tip of the iceberg—and not because her pulse races every time he uses it. She'd rather poke her eye out with a fork than let him know he affects her. Now he's trying to charm a good review out of her? Last. Straw. Gavin can have any woman he wants, but he only wants Red. The problem? He's spent a good amount of time convincing her he's a horse's ass. Her words. Risking upsetting the feisty critic further could ruin his family's business, but sometimes, when you know you've met your match, there's nothing left to do but play dirty and go all the way

Today's psychiatrists practice in an environment that poses difficult challenges. Both treatment time and duration are limited by insurance requirements; many facilities are understaffed; split treatment arrangements are typical; and high-risk, acutely suicidal patients are admitted to inpatient units for short lengths of stay. In addition, law now plays a pervasive role in the practice of psychiatry. The doctor-patient relationship is no longer defined solely by the involved parties. Clinicians must juggle these requirements and limitations while providing the very best care

to their patients, especially those at high risk. Preventing Patient Suicide: Clinical Assessment and Management provides the wisdom of Dr. Robert I. Simon's vast clinical experience, combined with the latest insights from the evidence-based psychiatric literature, to offer a cutting-edge survey of suicide prevention and management techniques. The author: Addresses sudden improvement in high-risk suicidal patients, a phenomenon both common and perilous, with techniques for determining whether the improvement is real or feigned. Explores in depth the misuse of suicide risk assessment forms, with emphasis on their inherent limitations. Examines the many entrenched myths and traditions about suicide, exposing them to the critical light of evidence-based medicine, including the concept of "imminent suicide risk" and the myth of "passive suicide ideation". Discusses the continuum of chronic and acute high-risk suicidal patients, the fluidity with which one can become the other, and the difficulty in assessing these patients. Explores how the law and psychiatry interact in frequently occurring clinical situations, and the importance of therapeutic risk management. In addition, the book contains a variety of features that illuminate the subject and enhance the reader's understanding, including: Inclusion of illustrative case studies, combined with commentary on commonly occurring but complex clinical situations. Key points at the end of each chapter that identify critical information. A Suicide Risk Assessment Self-Test, a teaching instrument that consists of fifty questions designed to enhance clinician suicide risk assessment by incorporating evidence-based risk and protective factors. Dr. Simon provides a nuanced, empathic, yet

pragmatic perspective on identifying, assessing, and managing the suicidal patient while successfully navigating a complex legal and clinical environment that poses its own risks to the practitioner.

If you've ever been intrigued by the tarot but were confounded by the complexities

of multi-card spreads and the vague interpretations given in most books, this is the guide for you. Here is a real breakthrough in interpreting the tarot! With Tarot Made Easy you can easily interpret the meaning of any card and apply it to the particular circumstances of your life. With the simple process outlined here, you need only choose one tarot card and then consult one (or several) of the 32 categories listed under each card -- including Romance, Travel, Career, Finances, Friends, and Special Guidance -- to discover the card's specific message for you. For example, if you want to know about your romantic future and the Queen of Cups turns up, you may find that the standard description given is "an honest, devoted woman; loving intelligence and happiness." How should you interpret this? But with Tarot Made Easy, the Queen of Cups Romance category tells you that "someone will enter your life in whom you will be very interested and you will meet this person very close to your home, if not outside your front door." This easy but accurate system banishes the vague interpretations found in most books and gives you the immediate, specific insights you need.
