The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

Natural Resources, Energy, and Environmental Law

Flows of the Columbia River, although modified substantially during the twentieth century, still vary considerably between seasons and between years. Lowest flows tend to occur during summer months when demand for irrigation water is at its highest and when water temperatures are greatest. These periods of low flows, high demand, and high temperature are critical periods for juvenile salmon migrating downstream through the Columbia River hydropower system. Although

impacts on salmon of any individual water withdrawal may be small, the cumulative effects of numerous withdrawals will affect Columbia River flows and would pose increased risks to salmon survival. The body of scientific knowledge explaining salmon migratory behavior and physiology is substantial, but imperfect, and decision makers should acknowledge this and be willing to take action in the face of uncertainties. In order to provide a more comprehensive water permitting process, the State of Washington, Canada, other basin states, and tribal groups should establish a basin-wide forum to consider future water withdrawal application permits. If the State of Washington issues additional permits for water withdrawals from the Columbia River, those permits should contain provisions that allow withdrawals to be curtailed during critical high-demand periods.

Journal of land use & environmental law

Water and Climate in the Western United States highlights the opportunity for and necessity of change in management of water, the West's most crucial resource. As old policies and institutions fail to meet changing demands for and availability of w

Mining, Minerals, and the Environment in Idaho, 1994

The Technology of Property Rights combines the understanding of institutions and institutional change with a discussion of the latest technologies and their influence on the measurement and monitoring of property rights. The contributors analyze specific applications for fisheries, whales, water quality, various pollutants, as well as other pressing environmental issues. No other work brings together an economic understanding of environmental issues with technological expertise in the way this volume does.
